

SECURITY AND RESPONSIBLE AI STATEMENT

Effective Date: June 15, 2026

1. Introduction

NewsIQ is committed to building trustworthy, secure, and responsible AI-powered tools that help users better understand the news.

Our goal is to improve comprehension, context, and transparency while respecting user privacy, publisher rights, and the limitations of artificial intelligence systems.

2. Security Principles

NewsIQ follows security principles designed to protect users, systems, and information.

Our security objectives include:

- Confidentiality;
- Integrity;
- Availability;
- Resilience;
- Data minimization.

Security is incorporated throughout the design, development, and operation of the Services.

3. Technical Safeguards

NewsIQ may employ measures including:

Encryption

- HTTPS encryption;
- TLS transport security;
- Encryption in transit;
- Encryption of sensitive information where appropriate.

Authentication

- Secure login mechanisms;
- Session protection;

- OAuth authentication;
- Credential safeguards.

Access Controls

- Role-based access restrictions;
- Least-privilege principles;
- Internal authorization controls.

Monitoring

- Logging;
 - Rate limiting;
 - Abuse detection;
 - Infrastructure monitoring;
 - Incident response procedures.
-

4. Data Minimization

NewsIQ seeks to collect and process only information reasonably necessary to:

- Operate the Services;
- Provide personalization;
- Improve products;
- Maintain security;
- Meet legal obligations.

Whenever possible, unnecessary data collection is avoided.

5. Responsible AI Principles

NewsIQ aims to develop AI systems guided by principles of:

- Transparency;
 - Safety;
 - Fairness;
 - Accountability;
 - Privacy;
 - Human oversight.
-

6. Human Oversight

Artificial intelligence systems are designed to assist users rather than replace human judgment.

Users remain responsible for evaluating information and making decisions based on their own judgment.

NewsIQ encourages users to consult original sources and verify important information independently.

7. AI Limitations

AI systems are probabilistic and inherently imperfect.

Outputs may:

- Contain inaccuracies;
- Omit relevant facts;
- Misinterpret context;
- Produce outdated information;
- Reflect ambiguity in source materials.

AI-generated outputs should not be considered definitive or authoritative.

8. Bias and Fairness

NewsIQ recognizes that AI systems may exhibit limitations or unintended biases.

NewsIQ continuously seeks to improve:

- Neutrality;
- Transparency;
- Contextual understanding;
- Source diversity.

Complete elimination of bias is not possible, and users should consider multiple sources when evaluating information.

9. Transparency

NewsIQ strives to provide transparency regarding:

- AI-generated summaries;
- Source attribution;
- Comparison tools;
- Timeline generation;
- Difference analysis.

Where feasible, users are encouraged to access original publisher content.

10. Security Incident Response

NewsIQ maintains procedures intended to:

- Detect threats;
 - Investigate incidents;
 - Mitigate risks;
 - Restore operations;
 - Comply with applicable notification obligations.
-

11. Continuous Improvement

Security and AI systems evolve over time.

NewsIQ continuously reviews:

- Infrastructure;
 - AI systems;
 - Privacy practices;
 - Safety measures;
 - Monitoring capabilities.
-

12. No Absolute Guarantees

No system can guarantee complete security or perfect accuracy.

Users should understand that:

- Cybersecurity risks exist;
- AI limitations exist;
- Technical failures may occur.

NewsIQ strives to reduce these risks but cannot eliminate them entirely.
